SURFACE FINISHING
SPECIALISTS

**ENGINEERED
ABRASIVE
TECHNOLOGY**

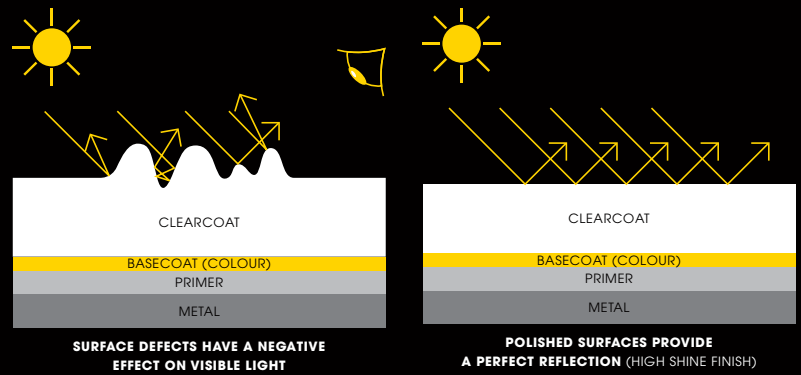

Farécla compounds use Engineered Abrasive Technology Developed by our scientists in a state-of-the-art R&D facility.

Only the highest quality raw materials are used to ensure the engineered particles quickly, efficiently and permanently remove defects, such as scratches, sanding marks, swirls, holograms and oxidation.

**WHY POLISH
THE SURFACE?**

Defects have a variety of negative effects on visible light which the eye perceives as a reduction in surface quality. Polishing the surface removes the defects which can no longer affect light, leaving a high gloss finish.

**WHAT YOU SEE
IS WHAT YOU GET**

**FILLING VS
PERMANENT
DEFECT REMOVAL**

Farécla use abrasives to permanently remove defects. Fillers are a quick way to give the temporary illusion of a polished finish.

These fillers can fall away causing defects to return. Farécla's engineered abrasive technology prevents comebacks and provides a permanent finish.

**OUR RESTORE
PROCESS IN SHORT**

The surface finishing process can differ depending on the defects. Larger defects will need sanding down before polishing to a mirror finish, whereas smaller defects may only require polishing.

TIPS:

- Ensure surfaces are thoroughly clean before polishing to prevent additional defects being applied to surfaces
- Ensure pads are clean before use Dried compound can clog pads and damage surfaces
- Never use a dirty cloth!

G360 SUPER FAST SYSTEM.

"No need for P3000, so cost effective faster process"

- Halliwell Jones, Chester

"Better, quicker system, great on blacks - zero swirls and holograms"

- Steve Walker Bodyshop

"Fantastic new innovative product saving time and money, has changed our polishing process dramatically"

- AW Repair Group

"Faster polishing process and increased confidence that jobs won't come back"

- Gordon Cooley Coachbuilders

"Great results without P3000 - faster, and less reworks"

- Rye Street Group
