VACUUM SHROUD KIT

IMPROVES SURFACE VISIBILITY WHILE REDUCING AIRBORNE SILICA DUST!

Hand grinding of concrete and masonry surfaces and mortar is a tough, dirty task. It doesn't have to be with the Norton Clipper Vacuum Shroud. The Vacuum Shroud's design creates a cyclonic effect extracting dust and debris from the work surface into the support vacuum. This prolongs the life of the grinding cup and grinder and provides a smoother surface while decreasing the chance of dust particle inhalation. A durable, heavy-duty, scratch-resistant plastic design can withstand the constant abuse of hand grinding applications. The hinged front can be used to work closely to the corner of the walls or improve visibility of the surface while reducing airborne dust.

TECH TIP

The Norton Clipper Vacuum Shroud design and the rotation of the grinder create a cyclone effect pulling debris and dust from the work area into the vacuum channel. This technology allows better operating conditions, prolongs the grinder and tooling life and more importantly decreases chances of silica inhalation.
