BLAZEY

BLAZING THE WAY WITH THE NEXT GENERATION OF FIBRE DISCS

SAINT-GOBAIN

Power through tough applications quickly with the next generation Blaze.

The BlazeX F970X fibre discs have been developed with carbon steel and other soft metals, to provide an aggressive, yet cool cut, preventing work-piece damage and long life, meaning fewer discs are needed and overall abrasive cost can be reduced. The improved Blaze micro-fracturing grain delivers better cut rate, and longer life when compared to blended ceramic alumina discs. A heavy fibre backing resists tears while providing better face to surface grinding.

CARBON STEEL

BLAZEX F970X

A new and improved ceramic grain composition for fast and smooth cutting on carbon steel and other soft-to-grind metals.

- The improved ceramic alumina micro-fracturing grain constantly exposed sharper grain edges to significantly increase cut rate and life
- Tear resistant – heavier fibre backing for additional strength in tough applications
- Product details are engraved on the back of the disc for easy product identification.

| PRODUCT | SIZE (mm) | GRIT | ART NO |
|--------------|-----------|------|-------------|
