SAINT-GOBAIN EXPANDS PRODUCTION PLANT IN STAVERTON

As the industry's needs for high-accuracy and high-speed grinding tools are constantly growing, we are developing the most advanced production capabilities to guarantee that your grinding wheels are maintained in optimum condition.

Recent investments in machinery have enabled our Staverton (UK) facility to double the capacity of its production line and cut lead times. From 3D design development to the production of a whole range of products for different applications and various services including assembly, special balancing, reprofiling of Norton Winter and other brands of dressing tools - the Staverton plant offers customised high-end performance solutions for rotary dressers.

As the worldwide centre of manufacturing and service for roller dressers, Staverton is at the heart of our diamond tool operations.

CNC DRESSERS

Qualified natural diamonds and CVD logs combined with our special and resistant bond provide accuracy and longer lifetime in various industries, including Bearing, Gear (worms, bevel and profile grinding), Automotive, Tools and Aerospace.

PROFILE DRESSERS

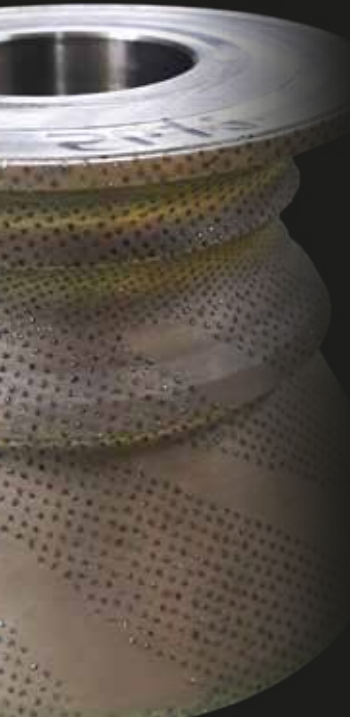

We offer two alternatives to cover all market needs:

Reverse plated dressers:

- For tightest tolerances
- Fine and complex profiles
- High accuracy

Infiltrated dressers:

- Longer lifetime
- Shorter delivery time
- Grits and/or CVD reinforcements
- Lower concentration for more open wheels
- Recommended for more aggressive wheel specification

LEADING TECHNICAL EXPERTISE

Benefit from our full range of services:

- Assembling dressers to spindles to keep the tightest running tolerance.
- Relapping dressers to extend product lifetime, maintains the precision and timing.
- Data based product design to optimise your process.
- Repair and/or replacement of spindles.
- Additional services, such as FIS process analysis, MDress, process monitoring and diagnostics.
